DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1,3,5,7,9,11,13,15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Trefonas cited on applicant's IDS of March 11, 2004 in view of Bringhen et al. US patent no. 6,069,170.

As shown in Figure 2 Trefonas teaches a polymer for an antireflection coating used in lithography. The polymer has a hydroxyethyl methacrylate monomer as a crosslinking group, a styrene monomer as a light absorbing monomer and a methyl methacrylate monomer as an additional monomer having an ester group. The polymer has a hydrocarbon backbone.

Trefonas does not teach the polymer backbone is a siloxane backbone.

Bringhen teaches a polymer having light absorbing properties and teaches in claim 18 that the polymer may have a hydrocarbon backbone or a siloxane backbone.

It would have been obvious to one of ordinary skill in the art to replace the hydrocarbon backbone of the polymer taught in Trefonas with a siloxane backbone as taught in Bringhen with a reasonable

Art Unit: 1752

expectation of obtaining an antireflection film because Bringham teaches either backbone may be used with polymer having light absorbing properties.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims have m,n,p referring to the amount of oxygen and the number of R groups in the monomers. Should they be the same?

6. Claim 2,4,6,8,10,12,14,16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The first and third monomers in claim 2 are the same. What is the difference between them.
